Online Advanced Lead Awareness for Construction

Intended Audience

This Advanced Lead Awareness safety training is designed for construction workers and managers who are responsible for the safety of their job site according to OSHA regulations. The information provided is important for any employee in the construction industry.

- Construction Foremen
- Construction Supervisors
- Construction Workers

Learning Objectives

This online safety course addresses the specific nature of operations which could result in exposure to lead above the reaction level. You will learn the Environmental Protection Agency's requirements for ensuring safety to the highest possible standard in the workplace. When you have finished with this course, you will have a better understanding of the properties and uses of lead, health hazards, lead standards and exposure limits, and the control of lead in the workplace.

Course Topics

- Overview of Lead Awareness in Construction
- Lead Awareness Program Requirements
- How a Lead Awareness Program Works
- Properties and Uses of Lead
- Health Hazards

- Standards and Exposure Limits

- Medical Surveillance and Lead Removal

- Lead Controls
