

Online Confined Space Awareness for Construction

Intended Audience

This course is principally intended for construction workers with only limited exposure in work locations where confined spaces exist, but which they are not permitted to enter, attend or otherwise work in those confined spaces. It is important for workers to be able to recognize likely confined space environments, the potential hazards encountered and what they need to do to avoid hazards or exposures.

- Construction Workers
- Construction Foremen
- Construction Managers

This Course is Based on:

OSHA's Confined Space in Construction Standard as found in 29 CFR 1926 Subpart AA.

Learning Objectives

By taking this course, you will have a more thorough and up-to-date understanding of the equipment, systems and procedures necessary to assist you in reducing the risks of workplace accidents due to confined spaces. Upon successful completion, you will:

- Identify examples of confined spaces and the dangers associated with confined spaces
- Recognize that OSHA has strict requirements for Confined Space in Construction, found in 29 CFR 1926, Subpart AA

- Describe the major difference between a confined space and a permit-required confined space
- Recognize that only select, trained, and authorized persons may enter permit-required confined spaces

Course Topics

- Introduction to Confined Spaces
 - Backgrounds
 - Definitions
- Common Types of Confined Spaces
- Principal Hazards of Confined Spaces
- Importance of Confined Space Location Recognition
- Importance of Signs and Labels
- Importance of Reporting Potential Hazards
- Confined Spaces in Construction Summary
