

Online Forklift Hazards for Construction

Intended Audience

The Forklift Hazards for Construction online safety course is designed specifically for forklift operators and trainers, as well as individuals who may potentially undergo forklift training for work at the jobsite at a later date. Individuals who will specifically benefit from this course include the following:

- Construction forklift operators
- Construction forklift trainers
- Construction workers who may use forklifts

If you have any concerns as to whether this course is appropriate for you or your industry, please contact us.

Learning Objectives

The Forklift Hazards for Construction online training is an intermediate-level course designed to teach a broad scope of safety rules surrounding operating a forklift. Participants can expect to learn how to establish a standard checklist for ensuring consistency and best practices in forklift operations. Additionally, participants can expect to cover the essential tasks forklift operators should observe, as governed by OSHA standards.

This online training offers a broad, intermediate-level training regarding proper forklift safety training and operations in accordance with OSHA standards.

Course Topics

- Introduction to forklift safety
- Training surrounding forklifts
- Basic terminology
- Stability of forklifts
- Four basic tasks
- Basic rules of operation
- Final considerations
