# Online Ladder Safety Awareness for Construction

## Intended Audience

This introductory-level online safety course teaches those on the construction site how to prevent avoidable accidents using ladders. This course is specifically ideal for:

- Construction workers

If you have any concerns as to whether this course is appropriate for you or your industry, please contact us.

## Learning Objectives

The Ladder Safety Awareness for Construction course is an introductory-level online course designed to teach participants how to correctly and properly use ladders on the construction site, as well as review both the capabilities and limitations of ladders. Furthermore, the course will cover safe work practices and techniques for accident protection onsite.

This online safety course will provide participants with applicable OSHA ladder safety training on how properly select, prepare, and set up ladders according to the job being performed. The course will cover the correct usage of ladders in conjunction to the equipment used on the job.

## Course Topics

- Introduction to ladder safety
- Situational analysis
- Safe work practices
- Summary of overall ladder safety
- Cumulative safety drill
