

Mold, OSHA's Position for Construction

Intended Audience

This intermediate-level online course is designed for all contractors and other professionals who provide mold and moisture remediation services, including construction contractors, supervisors, and employees, environmental consultants, and health and safety professionals. Additionally, it may be taken by anyone who needs more information about mold hazards and relevant OSHA training.

Learning Objectives

During the Mold, OSHA's Position for Construction course, students will learn more about why mold is considered hazardous and how to prevent and remove it, including:

- Identifying mold
- Important facts about mold
- Mold prevention and remediation plans
- Common health effects of mold exposure
- Personal protective equipment (PPE)
- Mold sampling

Course materials also include a mold resource list to help business owners find professional help for mold infiltrations in the workplace.

Elk Environmental Services is partnered with Clicksafety to offer our clients quality online training.
