

Online Compressed Gas Cylinder Safety Awareness for General Industry

Intended Audience

Compressed Gas Cylinder Safety Awareness for General Industry was designed for employees and employers in the following sectors:

- Manufacturing
- Warehousing and distribution
- Property management
- Trade and transportation
- Healthcare
- Other general industry sectors

If you have any concerns as to whether this course is appropriate for you or your industry, please contact us.

Learning Objectives

Members of the general industry workforces may come into contact with compressed gas cylinders at their worksites. When they do, they must know how to respond in a way that's both safe and effective. But when these cylinders are damaged, in poor condition, leaking, or contain an unknown gas, these professionals need to take extra steps to keep themselves and their entire team safe.

In this course, participants will receive intermediate-level compressed gas cylinder safety awareness training to help them target and eliminate workplace hazards.

NOTE: This course is not a substitute for any standards issued by the United States Department of Labor or the Occupational Safety and Health Administration (OSHA). We encourage participants to supplement their learning by reviewing Title 29 in OSHA's Code of Federal Regulations (CFR) Parts 1910.101, 1926.350 as well as the compressed gases general requirements outlined by the Compressed Gas Association (CGA).

Course Topics

- Compressed gas cylinder safety basics and standards
- Hazard identification
- Gas cylinder inspection, storage, and movement
- The dangers of PVC piping
- Pressure gauge reading
- Operation and handling, including appropriate personal protective equipment (PPE)
- Gas cylinder controls and post-operative considerations
- Abandoned compressed gas cylinders
- Compressed gas safety checklist and resources
