

Online Working Safely with Electricity for Construction

Intended Audience

This electrical safety training is intended for all construction workers whose operations bring them in contact with live electrical circuits and energized electrical equipment.

- Construction Employees
- Construction Managers
- Construction Supervisors

Learning Objectives

This online electrical safety course identifies four common electrical hazards, a variety of safe working procedures and inspection processes that are used to enhance a safe work site. You are encouraged to further your knowledge by taking additional electrical safety programs and also reviewing the reference guide on OSHA Standards, CFR 1926 and Subpart K on Electrical Construction.

Course Topics

- Overview of Electrical Safety
- Common Electrical Hazards
- Working with Electricity

Elk Environmental Services is partnered with Clicksafety to offer our clients quality online training.
