

# Online 100 Questions & Answers on Electrical Safety for General Industry

## Intended Audience

This 3-hour online course is appropriate for individuals who must work safely with and around electricity on the job site, including workers, managers, and supervisors. Course materials are designed for intermediate-level students who have some familiarity with topics on electrical safety.

## Learning Objectives

During this intermediate online course, students will receive 100 commonly asked questions on electrical safety with detailed answers. The questions are broken down into critical topics in workplace electrical safety, including:

- Safety Standards
- Hazard and Risk Analysis
- Personal Protective Equipment
- Safety Grounds
- Approach Boundaries
- Safety Equipment
- Arc Flash and Arc Fault
- Lockout /Tagout (LOTO)
- Checking for Absence of Voltage
- Electrical Safety Definitions

All questions focus on key definitions and terms, preparing students for the quiz at the end of the course.
