Learning Objectives

This introductory online course explains how to stay safe when working on job sites where forklifts are used. Course topics include:

- Seven forklift classifications
- Common forklift hazards and statistics
- Strategies for minimizing and eliminating hazards
- Regulations and resources on forklift safety
- Best practices for communicating hazards and how they should be corrected to operators and other workers
- Powered industrial trucks, including rider, narrow aisle, hand, and hand/rider trucks
- Electric and internal combustion tractors
- OSHA and National Institute of Occupational Safety and Health (NIOSH) recommendations and standards
- Best practices for pedestrian traffic

- Lifting personnel
- Identifying reckless forklift operation
- Safe unloading strategies for trucks and trailers
- Spotter requirements
- Unattended/parked forklifts
- Forklift fueling and battery charging

Course materials are based on OSHA Standard 29 CFR 1910.178 Subpart N, Materials Handling and Storage.

Elk Environmental Services is partnered with Clicksafety to offer our clients quality online training.
