

Online Laser Hazards for Construction

Intended Audience

The Laser Hazards for Construction course is intended for all those on the construction worksite with particular emphasis on those working with lasers. Individuals who will specifically benefit from this course include the following:

- Construction workers
- Construction managers
- Construction supervisors
- Construction foremen

If you have any concerns as to whether this course is appropriate for you or your industry, please contact us.

Learning Objectives

The Laser Hazards for Construction online safety course is an intermediate-level training that communicates the importance of using proper guidelines while using lasers at the construction jobsite. Participants are encouraged to further their knowledge after this course by taking additional laser safety courses, such as Laser Safety Officer Training.

NOTICE: Participants are also encouraged to review the primary reference guide for this course, which can be found in 29 CFR 1926.54.

This course teaches the basics of laser applications, hazards, controls, and more for use on the construction jobsite.

Course Topics

- General laser safety awareness
- Laser characteristics
- Common laser hazards
- Laser hazard control
- Regulatory issues for laser use

Elk Environmental Services is partnered with ClickSafety to offer our clients quality online training.
