

# Online Hexavalent Chromium Awareness for General Industry

## Intended Audience

The Hexavalent Chromium Awareness for General Industry safety course is designed for both construction and general industry workers who may be exposed to Hexavalent Chromium in the workplace. Individuals who will specifically benefit from this course include the following:

- Construction workers
- General industry workers
- Shipyard workers

If you have any concerns as to whether this course is appropriate for you or your industry, please contact us.

## Learning Objectives

The Hexavalent Chromium Awareness for General Industry course is an introductory-level online training designed to teach participants where this dangerous and potentially cancer-causing chemical may be found on varying worksites. Participants can expect to learn safe work practices, as well as best practices if an accidental exposure should occur.

This online course covers the health hazards associated with exposure, as well as best practices for ensuring overall safety on the jobsite. Additionally, participants can expect to learn the latest OSHA requirements for use of or exposure to this chemical.

## Course Topics

- Introduction to Hexavalent Chromium
- Background of Hexavalent Chromium
- Health hazards
- OSHA standards governing Hexavalent Chromium
- Standard highlights
- Communication of hazards

Elk Environmental Services is partnered with ClickSafety to offer our clients quality online training.
