

Online Forklift Operation Certification Preparation for Construction

Intended Audience

The Forklift Operator Certification Preparation for Construction training is a one hour and 30-minute long certificate/card-level course designed to prepare those for safe use of forklifts onsite. The training is primarily intended for the following:

- Fork truck operators
- Warehouse supervisors
- Construction managers
- Construction safety personnel

If you have any concerns as to whether this course is appropriate for you or your industry, please contact us.

Learning Objectives

The Forklift Operator Certification Preparation for Construction online course is a certificate-level course that focuses on the safe operation of a sit-down, counterbalanced forklift. Participants will learn the general safety rules and driver evaluations required in order to obtain a forklift certification card. Furthermore, students will learn the most up-to-date OSHA regulations and what one needs to know in order to remain safe while working with forklifts.

NOTICE: Employers must provide hands-on training and applicable certificate of completion. The Forklift Performance Test Form is provided upon request.

The Forklift Operator Certification Preparation for Construction course is based on applicable OSHA standards and covers construction of the lift, inspection criteria, operational characteristics, load handling, center of gravity and stability, fueling, general safety, and more. Participants are encouraged to further course learning and instruction by reviewing the OSHA regulations found in the Code of Federal Regulations, Article 29, General Industry Standards, Section 1910.178, Powered Industrial Trucks.

Course Topics

- Overview of forklift operator certification
- OSHA's regulatory changes
- Powered industrial trucks (general)
