

Online Sun and Other Outdoor Hazards for Construction

Intended Audience

The Sun and Other Outdoor Hazards for Construction is specifically geared towards those working in an outdoor construction setting and who are responsible for the safety and health practices of those working outdoors. Individuals who will specifically benefit from this course include the following:

- Construction workers
- Construction managers
- Construction foremen
- Construction supervisors

If you have any concerns as to whether this course is appropriate for you or your industry, please contact us.

Learning Objectives

The Sun and Other Outdoor Hazards for Construction online training is an intermediate-level course designed to focus on the hazards of working in the sun, as well as additional outdoor hazards in accordance with OSHA standards. Participants can expect to focus on minimizing the risk of sun exposure, as well as the potential for injury and illness, which will enable individuals to recognize, evaluate, and control varying outdoor hazards. This course focuses on federal OSHA standards, as well as guidelines established by the Centers for Disease Control (CDC), National Institute for Occupational Safety and Health (NIOSH), and the Environmental Protection Agency (EPA).

This online course provides real-life scenarios, case studies, and lessons learned to illustrate the need for compliance with OSHA requirements and industrial best practices. Participants can expect to learn to recognize, evaluate, and control risks in outdoor hazard scenarios.
