

Online Slips, Trips, and Falls for Construction

Intended Audience

This safety course was designed specifically for all members of the construction workforce, including:

- Construction employees
- Construction managers
- Construction supervisors

This course is not intended for employers or employees in general industry.

If you have any concerns as to whether this course is appropriate for you or your industry, please contact us.

Learning Objectives

As one of the leading causes of injury in the construction workplace, slips, trips, and falls must be prevented at all costs. To minimize the effects of these hazards, slip, trip and fall training for construction employees and employers is a must, as these professionals must be able to effectively plan for and communicate any potential risks. During our Slips, Trips, and Falls for Construction course, participants will receive intermediate-level safety training that can help keep themselves and their entire team safe while they work.

Course Topics

- Slip, trip, and fall basics
- Causes and effects
- OSHA slip, trip, and fall regulations
- Common exposures
- Planning, communicating, and educating for success
- Controlling your losses
- Fall safety and free-fall protection training

Elk Environmental Services is partnered with Clicksafety to offer our clients quality online training.
