

Online Soil Analysis and Classification for Construction

Intended Audience

This course was designed for the following members of the construction workforce:

- Construction workers
- Construction managers
- Construction supervisors
- Construction CP candidates

If you have any concerns as to whether this course is appropriate for you or your industry, please contact us.

Learning Objectives

Hazards like trenching cave-ins and exposure to hazardous materials can arise in this line of work, making it imperative to receive the necessary safety training. In Soils Analysis and Classification for Construction, participants will receive soil analysis training so they can reduce the number of workplace accidents and injuries that occur on their worksite.

Course Topics

- Soil basics and mechanics
- Soil stressors and de-stabilizers
- The definition of key industry terms
- Soil testing, analysis, and classification
- The Occupational Safety and Health Administration's (OSHA's) excavation standard
- Competent persons (CP)

- Case studies
- Practical exercises

Elk Environmental Services is partnered with Clicksafety to offer our clients quality online training.
