

# Online Methylene Chloride Awareness for General Industry

## Intended Audience

The Methylene Chloride Awareness for General Industry course is intended for all those within the General Industry sector who may be exposed to Methylene Chloride through the course of their work. This course will specifically benefit the following:

- General industry workers
- General industry managers
- General industry supervisors

If you have any concerns as to whether this course is appropriate for you or your industry, please contact us.

## Learning Objectives

The Methylene Chloride Awareness for General Industry course is designed to illustrate the many dangers associated with this chemical, as well as share best safe work practices for Methylene Chloride. Participants can expect this course to cover permissible exposure limits (PELs), controls and proper housekeeping, and safe handling and storage precautions. This course also teaches essential medical requirements and monitoring procedures as established by OSHA Subpart Z 29 CFR 1910.1052 for General Industry.

This online course is designed to promote awareness for OSHA standards surrounding this hazardous chemical, as well as provide knowledge regarding primary routes of exposure, its effects, and more.

## Course Topics

- Introduction to Methylene Chloride
- OSHA standards
- Hazards of Methylene Chloride
- Interactive Quizzes 1 & 2
- Hazard controls
