

Online Subpart D Construction Health Hazards for Construction

Intended Audience

The Subpart D Construction Health Hazards for Construction online safety course is designed for construction workers and managers who may be held responsible for the overall safety of the jobsite in accordance with OSHA regulations. Individuals who will specifically benefit from this course include the following:

- Construction workers
- Construction managers
- Construction supervisors
- Construction foremen

If you have any concerns as to whether this course is appropriate for you or your industry, please contact us.

Learning Objectives

The Subpart D Construction Health Hazards for Construction online course covers OSHA standards for MDA and lead hazards, as well as process safety management, hazardous waste operations and emergency response, and the design and construction of spray booths. Participants can expect this course to provide occupational safety and health information regarding the regulations for construction health hazards.

Subpart D Construction Health Hazards for Construction training is an intermediate-level course discussing the OSHA requirements as established in Subpart D of the OSHA Construction Standards. Participants will learn about individual responsibility for reporting unsafe and unhealthy working conditions and will be prepared to anticipate, recognize, evaluate, and control safety and health hazards both on and off the worksite.
