

Online Valley Fever Awareness for All Industries

Intended Audience

The Valley Fever Awareness for All Industries course is appropriate for all employee and managerial levels in industries in which risk of Valley Fever exposure may occur.

Individuals from the following industries may specifically benefit from this course:

- Construction
- Construction-related activities
- Trade and Transportation

If you have any concerns as to whether this course is appropriate for you or your industry, please contact us.

Learning Objectives

The Valley Fever Awareness for All Industries course is designed to provide introductory-level knowledge of Valley Fever, or coccidioidomycosis, an infection caused by breathing in a fungus that lives in the soil. Most commonly affecting those in construction or related activities in the southwestern U.S., Valley Fever training is required by California Assembly Bill 203 (2019-2020).

Throughout this training, participants will receive basic occupational safety and health considerations regarding Valley Fever, including hazard recognition, control strategies, standards, and best practices.

This training is designed to provide all workers with essential knowledge regarding Valley Fever and how to mitigate and prevent exposure.

Course Topics

- Occupational safety and health principles and techniques as they relate to Valley Fever
- General regulator standards
- Best management practices
- Hazard recognition, control strategies, and health considerations

Elk Environmental Services is partnered with Clicksafety to offer our clients quality online training.
