

# Online Advanced Rough Terrain Forklift for Construction

## Intended Audience

The Advanced Rough Terrain Forklift for Construction online course is designed for those on the construction worksite in charge of following applicable job site safety regulations. Specific individuals who will benefit from this course include the following:

- Rough terrain forklift operators
- Site safety managers
- Site safety engineers

If you have any concerns as to whether this course is appropriate for you or your industry, please contact us.

## Learning Objectives

The Advanced Rough Terrain Forklift for Construction online course is a certification-prep course designed to prepare participants for their C4 Forklift Operation Certificate. Participants can expect in-depth instruction regarding the operation of forklifts on rougher than normal work terrain. The course focuses on maintaining forklift stability and handling, as well as how to properly lift loads. Additionally, participants will learn general safety rules, proper inspection criteria, and the safe fueling of forklifts.

**NOTICE:** To receive your C4 Forklift Operation Certificate, you must take and pass the performance evaluation administered by your employer at your jobsite. This online course is a certificate-level course designed to teach participants about forklift safety. Participants should be prepared to discuss the operational parts of the rough terrain lift, the center of gravity (lift and load, and stability characteristics (pyramid).

## Course Topics

- Inspection criteria
- Operational characteristics
- Handling and placing loads
- Stability
- Fueling
- General safety rules
- Driver evaluations
