Online Scaffold Safety Awareness for Construction

Intended Audience

The Scaffold Safety Awareness for Construction online course is intended for those who may work around, near, or on a scaffold in the construction industry. Specific individuals who will benefit from this course include the following:

- Construction workers
- Construction managers
- Construction supervisors

If you have any concerns as to whether this course is appropriate for you or your industry, please contact us.

Learning Objectives

The Scaffold Safety Awareness for Construction online training is an introductory-level safety course that will discuss the principles of supported, rolling, suspending, and ladder jack scaffolds. Participants will learn the varying types of scaffold systems used throughout the construction industry, as well as the dangers associated with and the requirements for specific scaffold systems.

This course is designed to teach participants the roles of competent persons and the training needed to use scaffolds in a construction work environment. Promoting scaffold safety awareness, participants can expect to learn the dangers and requirements associated with using scaffolds, as well as types of scaffolds, and more.

Course Topics

- Introduction to scaffold safety in construction
- General safety measures for scaffolds
- Special types of scaffolds used

Elk Environmental Services is partnered with ClickSafety to offer our clients quality online training.
