

# Online Working Around Mobile Equipment Awareness for Construction

## Intended Audience

This course is specifically targeted for the following members of the road construction and construction industries:

- Workers
- Foremen
- Supervisors

If you have any concerns as to whether this course is appropriate for you or your industry, please contact us.

## Learning Objectives

When working with large, heavy equipment, workers, forepersons, and supervisors alike need to know how to stay safe on the job including knowing how to be aware of the job site around you while you work can minimize your risk for serious caught-between hazards. So if your road construction or construction job uses backhoes, rollers, or other similar machinery, Working Around Mobile Equipment Awareness for Construction covers the mobile equipment safety topics needed to keep you safe.

This brief introductory course teaches participants how to be safe when working with both mobile and stable machinery.

## Course Topics

- Occupational Safety and Health Administration (OSHA) safety regulations
- Types of mobile equipment, including backhoes, trenchers, cranes, rollers, hi-lifts, and scrapers
- General safety rules
- Personal responsibility for safety as a machine operator and/or bystander
