

Online Work Zone Traffic Safety Tips for Construction

Intended Audience

The Work Zone Traffic Safety Tips for Construction online training is designed for construction workers and, in particular, those who may work in active traffic zones. Individuals who will specifically benefit from this course include the following:

- Manufacturing workers
- Road construction workers
- Road construction supervisors
- Specialized workers
- Specialized supervisors

If you have any concerns as to whether this course is appropriate for you or your industry, please contact us.

Learning Objectives

The Work Zone Traffic Safety Tips for Construction online training is an intermediate-level safety course that offers participants practical safety tips based on actual traffic situations from field operations. Throughout the course, participants can expect to review a number of control issues and hazards involving the motoring public. Information provided will include common safety hazards that may be encountered in active traffic zones and how to ensure safety while working.

This course demonstrates both good and poor traffic control applications and how to identify common safety hazards one might face in active traffic zones. Participants will learn the best practices to avoid and control traffic hazards in work zones

Course Topics

- Traffic control devices
- Flagging
- Other common road hazards

Elk Environmental Services is partnered with ClickSafety to offer our clients quality online training.
