

Online Air Contaminants Awareness for General Industry

Intended Audience

The Air Contaminants Awareness for General Industry course is ideal for any worker or manager within the general industry sector who may come into contact with hazardous chemicals. Individuals who may specifically benefit from this course include the following:

- General industry workers
- General industry managers
- General industry supervisors

If you have any concerns as to whether this course is appropriate for you or your industry, please contact us.

Learning Objectives

The Air Contaminants Awareness for General Industry training is an introductory-level safety course that teaches OSHA's standards regarding air contaminants as established within Subpart Z 29 CFR 1910.1000 for General Industry. Participants can expect the course to focus on identification, exposure controls, and use of tables found in Subpart Z. Additionally, the course provides a general overview of chemicals that may be absorbed through the skin.

This online course discusses OSHA's standards surrounding air contaminants in the workplace. Additionally, participants will learn about engineering, administrative, work practice, and personal protective equipment (PPE) control measures.

Course Topics

- Air contaminants
 - Limits for air contaminants
 - Mineral dusts
 - Computation formulas
 - Airborne contaminant controls
- General safety requirements
