

Online Fall Protection Equipment for Construction

Intended Audience

This personal Fall Protection Equipment course is intended for all construction employees, supervisors and managers.

- Construction Workers
- Construction Supervisors
- Construction Managers

Learning Objectives

This Fall Protection Equipment training features case studies to prepare you for fall protection equipment testing. Specifically, this course will provide you with basic guidelines and methods used for inspecting fall protection equipment. You are encouraged to further your knowledge by reviewing the reference guide on OSHA fall protection equipment requirements as well as other sections, which include General Industry (29 CFR 1910), Construction (29 CFR 1926) and Fall Protection (Subpart M).

Course Topics

- Overview of Fall Protection Equipment
- Selection of Equipment
- Inspection and Maintenance
- Belts and Harness Inspection
- Additional Fall Protection Inspection
- Cleaning and Maintenance
- Donning and Doffing
- Fall Protection Case Study
