

Online Personal Protective Equipment Awareness for Construction

Intended Audience

Designed with information specific to the construction industry, this personal protective equipment training course is intended for:

- Construction Workers
- Construction Foremen
- Construction Supervisors

This course is not meant for employees and employers working in the general industry. Instead, these individuals can take advantage of our Personal Protective Equipment for General Industry course, which contains lessons geared towards the nuances of PPE outside of construction. If you are unsure which course is appropriate for you, please contact us.

Learning Objectives

Personal protective equipment (PPE) is an integral part of working safely on any job site. This introductory course provides students with the most pertinent information on how to choose, wear, and maintain PPE, as doing so properly could save lives. The topics covered include:

- PPE requirements according to Occupational Safety and Health Administration (OSHA) standards
- OSHA and American National Standards Institute (ANSI) rules and regulations for PPE use to protect the head, face, ears, eyes, body, hands, and feet
- Types of specialized equipment and when to use it
- How to identify risks associated with the failure to select the correct PPE

- Methods for conducting situational analyses, which help to determine which PPE is appropriate for any given situation

Elk Environmental Services is partnered with Clicksafety to offer our clients quality online training.
