

# Online Fall Protection for Construction

## Intended Audience

Fall Protection for Construction is intended for all employers and employees responsible for following OSHA's fall protection standards, including:

- Construction workers
- Construction supervisors
- Construction managers

To determine if this course is appropriate for your training needs, please contact us.

## Learning Objectives

This intermediate-level online course offers essential fall protection training for the construction industry. Course topics include:

- An overview of fall protection
- Common fall hazards
- Fall hazard evaluation and control
- Fall prevention training requirements
- Passive and active fall protection systems
- Alternate fall protection systems
- Fall protection planning
- Additional fall protection considerations

Course participants will learn how to avoid falls and mitigate hazards per OSHA, American National Standards Institute (ANSI), and National Institute for Occupational Safety and Health (NIOSH) recommendations for workplace safety.

Elk Environmental Services is partnered with Clicksafety to offer our clients quality online training.
