

Online Safe Forklift Operation for General Industry

Intended Audience

The Safe Forklift Operation for General Industry course is intended for all workers in the general industry sector who may come into contact or work directly with forklift operations. Specific industries may include warehousing, manufacturing, and transportation, and the following roles will specifically benefit from this course:

- Forklift operators
- Supervisors of forklift operations
- Forklift maintenance personnel
- Forklift non-operators

If you have any concerns as to whether this course is appropriate for you or your industry, please contact us.

Learning Objectives

The Safe Forklift Operation for General Industry training is an intermediate-level course focusing on common hazards associated with operating forklifts. This course provides participants with an overview of forklift operations, as well as risk mitigation techniques. Please note that this course is not intended to be used as training for forklift operator certification.

This online training is designed to identify forklift regulations and resources governing safe forklift operations, as well as identify the types of forklift classes and common parts.

Course Topics

- Regulations and resources
- Forklift classifications, types, and parts
- Operator and non-operator hazards and hazard recognition
- Personal protective equipment (PPE)
