Online Stairways and Ladders for Construction

Intended Audience

The Stairways and Ladders for Construction course is designed specifically for those working within the construction industry and is ideal for all those responsible for making ladder safety a top priority on the worksite. Specific individuals who will benefit from this course include the following:

- Construction workers
- Construction supervisors
- Construction managers

If you have any concerns as to whether this course is appropriate for you or your industry, please contact us.

Learning Objectives

The Stairways and Ladders for Construction online course is an intermediate-level safety course focusing on ladder safety in adherence with OSHA regulations. The course firmly defines related industry terms and explains the broad context the need for and plans for stairway safety regulations. Participants will learn from case studies in order to apply training to real life situations. Additionally, participants will be taught the necessary tools for following safe practices while using ladders and stairways in construction work environments.

This online training teaches a broad overview of OSHA safety requirements governing the use of stairways and ladders in a construction workplace. Because temporary stairs differ in safety concerns than ladders, participants will learn the rules governing safe use of both. Additionally, participants can expect to learn important definitions, rules, and how to choose the right ladder for different jobs.

Course Topics

- General definitions of stairways and ladders
- Temporary stairs
- Types of ladders
- Using ladders safely in the workplace
- Straight and stepladders
- Fixed ladders
