Online Coke Oven Emissions Awareness for General Industry

Intended Audience

The Coke Oven Emissions Awareness for General Industry course is intended for all those within the General Industry sector who work around coke ovens and/or may be exposed to hazardous emissions through the course of their work. This course will specifically benefit the following:

- General industry workers
- General industry managers
- General industry supervisors

If you have any concerns as to whether this course is appropriate for you or your industry, please contact us.

Learning Objectives

The Coke Oven Emissions Awareness for General Industry course is designed to share the three main routes of exposure, as well as essential coke oven safety knowledge for the General Industry sector. Participants can expect this course to focus on OSHA standards established by Sbpart Z 29 CFR 191.1029. This training is designed to help mitigate the risks of lung and kidney cancers for those who work around bituminous and other forms of coal. Learn essential personal protective equipment (PPE), risk mitigation techniques, and more.

This online course defines what both employers and employees must do to prevent toxic exposure to emissions from coke ovens.

Course Topics

- Properties and uses of coke ovens
- Primary routes of exposure to emissions from coke ovens
- Primary health hazards and permissible exposure limits (PELs)
- Safety requirements and PPE

Elk Environmental Services is partnered with ClickSafety to offer our clients quality online training.
