

Online Bloodborne Pathogens for Construction

Intended Audience

Bloodborne Pathogen Awareness for Construction offers PPE and bloodborne pathogen training that is appropriate for specific types of construction industry employees. Workers in other fields should complete the Bloodborne Pathogens Awareness for General Industry course, as this course is designed specifically for construction workers. To determine which courses and safety training bundles are best suited to your training needs, please contact us.

Learning Objectives

This introductory online course helps students identify the hazards associated with bloodborne pathogens and covers OSHA's standards for job site safety, where BBP exposure may occur. Course topics include:

- An overview of common bloodborne pathogens, including HIV, HBV, HCV, and AIDS
- How BBPs are transmitted, including accidents, CPR, and more
- Exposure prevention and control
- Best practices after exposure
- Common accidents and incidents that result in bloodborne pathogen exposure
- Proper use of personal protective equipment (PPE)
- Other potentially infectious materials (OPIM)

Students are also encouraged to review Center for Disease Control (CDC) references and OSHA BBP Standard 29 CFR 1910.1030 for additional information about BBP and related safety on the job.

Elk Environmental Services is partnered with Clicksafety to offer our clients quality online training.
