

Online Asbestos Hazards for Construction

Intended Audience

This course is appropriate for employees who work on sites where asbestos is used. It may be taken by construction workers, as well as foremen and supervisors who are responsible for ensuring workplace safety.

Learning Objectives

Participants in the Asbestos Hazards for Construction course will learn about asbestos hazards in the construction industry, including:

- Essential facts about asbestos
- OSHA regulations and classifications
- The designation and responsibilities of an asbestos Competent Person (CP)
- Testing and control
- Appropriate respiratory protection
- Responsibilities for workplace safety
- Symptoms of asbestos exposure
- Medical surveillance and when to seek treatment

Upon completion of the course, participants will be prepared to recognize and avoid asbestos hazards. Additionally, they will understand how to take appropriate measures to reduce their risk while working on construction sites.

Elk Environmental Services is partnered with Clicksafety to offer our clients quality online training.
